Condoms with genetically optimized gametes at coating medium that makes them fertile. A have a genetically optimized baby kits could be produced.

So there are singing bells, if you make the perimeter out of different shapes and the bowl part out of different blobby shapes could you make a singing bell that makes a melody

What is the most happiness and prosperity increasing big five type to change, when a trait is changed? A personal change, self empowerment book could tell people they could change this and make people happier, and likely increase opportunity and dating success simultaneously if this change is possible, and optimally,

easy.

Also:
A psychology test that finds things that are are the 90th percentile easiest to change about oneself could give advice on things that were easy to change and actually worked. They could write a book and make a website on “things you can actually change easily!” that could be popular. It could have have a thing on things that were 99th percentile easy to change and have it be the first chapter, the one I read 20% of actually read.

Think of some technologies that benefit MBTI ISJ:

Interviewless employment placement with described renumeration. a different version of MMPI with

questions that predict emplyment success, combined with dredit score might do it. Fill out the online test and just show up might work! Particularly at employers willing to employ better than 50th percentile people as employing them could actually be measured as upping their employee average.

The quantitatively measured as most actually instant eductional, possibly actual physical learning activity course, or perhaps an online course, that teaches an in-demand career skill could be noticeably beneficial to IS[]J

Think up a technology that is highly beneficial with the acronym SEX, also think up technologies that are an acronym for sex at the world's 14 most popular languages. That is an advertising effect.

sex:
性 or 上床 (having sex)

Køn
Seksi or seksiä (having sex)
sexe (having sex) relations sexuelles
סקס sex, having sex, (does not look like bing translator version)
लिंग sex
Kynlíf or samfarir sex or having sex
Seks
sexo relações sexuais sex or having sex
Секс интим sex or having sex
Sexo eroticos sex or erotic
セックス sex
sex (German and Swedish): sex (Swedish) sexing: könsbestämma

Стать секс sex or sex people have

semiconductor enhancement

excursion

[[thinking about people who think about ends and means, it is possible that a person, knowing their action will have effects on other questions/things, would make an math array defition, including

maybe set theories and inequalities at arrays, with the arrays containing [completed items]
it could be this already exists, and is called process optimization theory, and that process optimization theory could be used to describe relations between ends and means as well as find optima, both at quantifiable and inequality based amounts.

Non quantifiable inequalities like, is it bigger than the Earth” exist yet it is

possible to

“so, leslie, which shape of potato chips do you like better” (words seeking as means to a preferrable action), “I like the pringles they have at my credit union”, then this results in greater production of pringles while also producing a different nonoptimal end: Leslie likes her credit union more than is optimal and neglects to switch to a better credit union. So the equations, which might already be at process optimization theory, could describe the computer calculated most optimal course of action when people state something they would like to have happen. 20th century math but it could find minima of negatives and maxima of positives at a series of means and ends. This ability could be available online or at a phone app could let people know if

their AI generation of quizzes:

“800 million people at risk as climate breakdown causes Asia's vast glaciers to shrink. Populations in the high-mountain Asia region are particularly vulnerable to water shortages and in the past century, drought has caused more than 6 million deaths. “
Suggests that an ultra cheap dehumidifier that makes water from low humidity air could save many lives annually. Perhaps a an inexpensive mostly plastic electrical water making machine could be produced. The cheapest air condition (near dehumifier technology) I have ever seen was near $55.

Are there any things the body naturally produces where immunizing against them would cause people to live longer

gene therapy that affects mTOR could be a longevity drug.

“should I ask them out on a date ”
then AI auto generates 4 quiz items:
“Is he better than your parents?” “are you on contraceptives right now?” and “Is it less than a 20 minute commute, does he make you feel happy during or after when you see him”]]
